

## Canada Oil Sands – Case Study

---

Swift Worldwide resources possess an office in Calgary, Alberta in order to support our clients' activities in Canada. This is strategically positioned in one of the most promising and fastest growing oil & gas markets. Canada has the second largest amount of oil reserves in the world, 97% of which are in the oil sands; Oil Sands are a natural mixture of sands, water, clay and bitumen. Oil Sands are located in the Athabasca, Cold Lake and Peace River regions of northern Alberta. Explorers first reported the outcrops of these sands more than 200 years ago.

Swift has a proven track record of supporting client exploration and production (E&P) activities in more than 50 countries. Since 2007, Swift has been providing qualified, dedicated people to the following oil sands clients: Shell, Total, BP, and Conoco Phillips. Swift's services cover the entire asset lifecycle from feasibility and conceptual design phases of a project, to the construction, commissioning, and production phases. Swift is currently sourcing strong candidates for several different projects including the following:

- The Joslyn North Mine Project
- The Albian Sands
- The Muskeg River Mine Project
- The Jackpine Mine Project

At Swift, we realize the importance of knowing our industry, its challenges, and its innovation. Our dedicated team analyzes technological changes from syncrude to electricity extraction in order to make sure to provide the right people with the right expertise.
